TurboCoder Twelfth Edition – New features

TurboCoder Twelfth Edition Windows and Multi-User Network versions have new powerful features to assist clinical coders in choosing the correct code.

Alert Bar

All alerts to the user are now displayed below the Windows ribbon instead of the status bar at the bottom of the screen.

Text highlighting

Select any text and press Ctrl+H to highlight that text. The highlighting is transcribed to the new version during updates.

Type-to-Search index searching

Type-to-Search significantly speeds up index searches by sequentially finding modifiers in the ICD-10-AM and ACHI indexes after the Lead term has been found. Subterm search displays all pathways for a subterm or code.

Subterm index searching

Subterm search shortcuts pathway navigation by showing all (up to 20) pathways leading to a subterm or code, before or after the Lead term has been found.

PSSH
– Pre-emptive Search Spelling Help

Corrects spelling errors in the search criteria.

HitMap/HitCount

Instantly identify the relevant search areas in the classifications and standards.

Includes/Excludes notes – in context in the Tree Table of Contents

View all three levels of *Includes* and *Excludes* notes for individual codes without having to scroll back to the top of each chapter, block, category or code title.

EasyView Coding Rules and ACS

EasyView allows you to view the Coding Rule Title as you roll the cursor over the CR icon, enabling you to determine if the Coding Rule is relevant to the episode being coded.
This is especially useful when there are multiple CR icons applied to a code.

Dragon

Instant access to the TC from the desktop.

Zoom (tree, document, toolbar)

User personal preferences for font and window size.

Smart tables

All formatting preserved on screen, printout and copy/paste and Drag-n-drop.

Web-independent

TurboCoder operates off-line, and remains web-independent after download and fully functional without an internet connection.

Code with Confidence

TurboCoder is the foremost trusted ICD-10-AM/ACHI/ACS digital clinical coding tool for health classifications in Australia, New Zealand, Ireland and Saudi Arabia. And endorsed by HIMAA for educational purposes. With TurboCoder, you're able to find the right code, first time, every time.

TurboCoder with turbosearch

TurboCoder ICD-10-AM/ACHI/ACS Twelfth Edition is now available for the platform of your choice

– Windows and Citrix networks; Windows desktop.

Powerful network technology

Enhanced EIS Multi-User Networking Software Technology – downloads and updates quickly to your PC or network server for instant access and easy updating.

Fast to download and search

Our unique eComPress® and networking technology ensure that searching codes with TurboCoder is faster than other coding reference tools – with guaranteed search results.

Easy-to-use

TurboCoder is the powerful digital version of health classifications in a user-friendly format with a similar look and feel of the books.

Powerful search enabled through eComPress®

All words, numbers and codes are able to be searched and easily navigated and the classifications are automatically updated whenever new content or errata is available. You will also have instant access to fully hyperlinked Disease and Intervention codes, Coding Standards, Coding Rules and CHADx. TurboCoder's powerful search functionality guarantees you will find what you need, and is enabled by the Award-Winning eComPress® technology developed by Eurofield Information Solutions (EIS).

Powerful Multi-User Networking Software Technology

The TurboCoder proprietary Multi-User Networking Software Technology is designed to be extremely efficient and does not require any additional network servers or other hardware resources and additional network bandwidth. Saving capital investment, real estate, installation etc., and ongoing cost for hardware, OS support, maintenance and power.
